

Bhai, aapka target bilkul spot-on hai. Agar \$2000 jeetne hain, toh kuch aisa banana hoga jise dekh kar judges bolein, *"Ye pehle kisine kyun nahi socha?"*

Sabse pehle ek reality check: **Aaj 19 June hai aur deadline 24 June hai.** Hamare paas sirf 5 din hain! Lekin ek focused, high-impact tool banane ke liye 5 din kaafi hain.

Jeetne ke liye humein ek aisi problem pakadni hai jo **har developer ko aati hai** aur jisme sabse zyada time waste hota hai. Chatbot nahi banana hai, ek **Action-Taker** banana hai.

Yahan 3 "Mouth-Opening" (mind-blowing) ideas hain jo GitLab Orbit aur Duo Agent Platform ki poori power use karte hain:

3 Winning Ideas (Brainstorming)

Idea 1: The "Pipeline Paramedic" (Auto CI/CD Fixer) 🔥 *Highly Recommended*

Problem: Jab CI/CD pipeline fail hoti hai (jaise koi test case phat gaya ya build fail ho gaya), toh developer ko logs padhne padte hain, error dhundhna padta hai, locally reproduce karna padta hai, aur fir fix push karna padta hai. Bahut time waste hota hai.

The Agent: Ek GitLab Orbit Skill jo background mein pipelines ko monitor karti hai.

- **Action:** Jaise hi pipeline fail hoti hai, ye agent automatically error logs fetch karta hai.
- **Magic:** GitLab Duo ka use karke root cause samajhta hai.
- **Automation:** Ye CLI/API ke through automatically code file ko modify karta hai, fix apply karta hai, aur ek naya "Fix" Merge Request (MR) create kar deta hai.
- **Wow Factor for Judges:** Video mein red pipeline ka apne aap green ho jana bahut impactful lagega.

Idea 2: "Dependency Debt-Destroyer"

Problem: Purani libraries ya deprecated APIs ko naye version mein update karna ek nightmare hota hai (jaise React 17 se 18, ya Python 2 se 3).

The Agent: Ek CLI-based Orbit Agent jise aap apne local project folder mein run karte hain.

- **Action:** Ye agent poore codebase ko scan karta hai, outdated packages dhundhta hai.
- **Magic:** Ye sirf package.json update nahi karta, balki jahan-jahan purana function use hua hai, wahan code ko automatically naye syntax mein rewrite karta hai.
- **Automation:** Har badi library update ke liye ek separate, clean MR create karta hai.

Idea 3: "Review-to-Reality" Agent

Problem: Code review mein senior developers comments likh dete hain (e.g., "Extract this into a separate function", "Use a switch case here"), aur junior dev ko wapas jaa kar saare changes karne padte hain.

The Agent: Ek automation flow.

- **Action:** Ye agent MR ke comments ko padhta hai.
- **Magic:** Duo Agent Platform ka use karke samajhta hai ki reviewer kya chahta hai.
- **Automation:** Ye apne aap un comments ko actual code changes mein convert karke commit push kar deta hai. Sirf "Looks good" bolne wala bot nahi, actual mein code likhne

wala agent!

Winning Submission Strategy (5 Din Ka Plan)

Agar aap Idea 1 (Pipeline Paramedic) ya koi aur idea chunte hain, toh submission ki 4 mandatory cheezon ko aise tackle karna hai:

1. Public Code Repo (GitHub/GitLab)

- **Structure:** Repo bahut clean honi chahiye. Ek README.md banaiye jisme ekdum clear commands ho: npm install, orbit run my-skill.
- **Pro Tip:** README mein Architecture Diagram zaroor add karein (ek simple flowchart ki agent kaam kaise karta hai). Judges technical implementation ko 25% weightage de rahe hain.

2. MIT License

- Repo banate waqt hi "Add License" par click karke **MIT License** select kar lijiye. Isme galti ki gunjaish nahi rakhni hai warna disqualify ho jayenge.

3. The 3-Minute Demo Video (The Game Changer)

Judges hazaron submissions dekhenge. Aapka video pehle 15 seconds mein unhe hook karna chahiye.

- **0:00 - 0:30 (The Hook & Problem):** "Every developer hates broken pipelines. It ruins flow. Meet Pipeline Paramedic." (Screen par red failing pipeline dikhayein).
- **0:30 - 2:00 (The Action):** Agent ko CLI me run hote hue dikhayein. Dikhayein kaise wo GitLab Orbit API se logs le raha hai, fix generate kar raha hai, aur MR create kar raha hai. (Chatbot interface bilkul mat dikhana, command-line aur code dikhana).
- **2:00 - 3:00 (The Result):** Dikhayein naya MR merge ho raha hai aur pipeline green ho gayi. Apna face dikhakar briefly tech stack explain karein.

4. Text Description (The Story)

Ise ek boring technical document mat banaiye. Ise ek "Hero's Journey" ki tarah likhein:

- **The Villain:** CI/CD pipeline failures jo developers ka time khaate hain.
- **The Hero:** Aapka Orbit Agent.
- **The Weapon:** GitLab Duo aur Orbit API jisne problem ko solve kiya.
- **The Impact:** "Imagine saving 2 hours per developer per week across a 100-person engineering team." (Potential Impact criteria ko hit karega).

In teen ideas mein se aapko sabse zyada exciting kaunsa lag raha hai, ya aapke dimaag mein koi apni daily life ki problem hai jise hum automate karne ka plan banayein?
